

INSECTICIDE

CONTAINS PROPARGITE, THE ACTIVE INGREDIENT USED IN COMITE® II

GET AN EARLY START ON MITES WITH DECIMITE™

The best end-of-season results start with early preparation. Get an early start on yield-robbing corn mites with Decimite™. One application at the first sign of mite activity provides immediate control with contact activity plus long-lasting residual control.

Decimite is tough on mites with three sites of activity providing a layer of triple-threat protection with no known resistance. While corn mites don't stand a chance, Decimite is gentle on beneficial insects including bees. Plus, the flexibility of Decimite allows for a second application later in the season.

KEY BENEFITS

- Contact activity for immediate control
- Long-lasting residual activity for up to four weeks
- Easy on beneficial insects including bees
- Three sites of activity
- No known resistance

KEY USES

- Alfalfa
- Beans, dry
- Corn
- Cotton
- Peanuts*
- Sorghum

PORTFOLIO

Bootstrapped and ready to serve, we deliver battle-tested chemistries and an experience like no other. Proud to be 100% American-owned, our mission is to help you every step of the way.

APPLICATION INFORMATION

Decimite™ is a liquid emulsifiable concentrate used in sprays for controlling mites. To ensure complete coverage and achieve the best results, applying Decimite to both the upper and lower leaf surfaces as well as fruit is recommended. Decimite is most effective in daytime temperatures averaging above 70°F. For best results apply when mites first appear at the full label rate.

MIXING INSTRUCTIONS

1. Fill spray tank with water until three-quarters full.
2. Based on the specified rate add Decimite to the spray tank.
3. Continue filling the spray tank with water until full.
4. Agitate well.
5. Spray vegetation and fruit comprehensively to ensure best results.

TANK-MIX COMPATIBILITIES

Decimite is compatible with a variety of pesticides. Follow all cautions and limitations listed on labeling of all products used in mixture. To ensure the product is compatible in your area it is recommended that smaller trials under local conditions are held prior to larger scale use. Variations in local conditions, specifically water quality, may influence the effectiveness of the product.

- Do NOT use penetrating surfactants. A non-penetrating surfactant can be added under certain conditions. For recommendations contact your local surfactant supplier.
- Do NOT apply with petroleum based foliar spray oils to prevent potential phytotoxicity.
- Do NOT add alkaline materials (i.e. lime, lime sulfur or Bordeaux) doing so will reduce the effectiveness of Decimite.

KEY INSECTS

Bank grass mites
Pacific spider mites
Strawberry spider mites
Two-spotted spider mites
