

HERBICIDE

Inflame™ 280 SL

RAPID BURNDOWN CONTROL

When unwanted weeds start to take hold of your field, turn to Inflame™ 280 SL for quick and consistent control of some of the toughest broadleaves and grass weeds. Inflame 280 SL provides excellent crop safety, so you can protect your crops without damaging your yield. Plus, Inflame 280 SL can be tank mixed for flexible application rates and easy to use application instructions. Inflame 280 SL delivers fast control and its' unique mode of action makes it an excellent tool in rotational programs. This nonselective herbicide is formulated for excellent leaf coverage and retention. It even works on many glyphosate resistant weeds. Set your soybean, corn, cotton, and fallow up for success—control weeds from the start with Inflame 280 SL.

KEY BENEFITS

- Works quickly to deliver nonselective control of broadleaf and grass weeds
- Controls many glyphosate resistant weeds
- Economical and effective control prior to planting

KEY USES

- Canola
- Corn (field, silage, sweet)
- Cotton
- Fallow
- Soybeans
- Sugar Beet

PRODUCT NOTES

EPA REGISTRATION NUMBER

91234-82

ACTIVE INGREDIENT

Glufosinate 24.5%

FORMULATION

Soluble Liquid

HRAC NUMBER

10

SIGNAL WORD

Caution

PACKAGE SIZE

2 x 2.5 gal
265 gal

RESTRICTED USE

No

Refer to label for specific use restrictions.

Relevant. Simple. Reliable.

APPLICATION INFORMATION

Ground Application:

Apply Inflame 280 SL broadcast in a minimum of 10 gallons of water per acre using a minimum spray pressure of 40 psi and a maximum ground speed of 10 mph. The use of 80 degree or 110 degree flat fan nozzles will provide optimum spray coverage and canopy penetration. Application of the spray at a 45-degree angle forward will result in better spray coverage. Under dense weed/crop canopies, use a broadcast rate of 15-20 gallons of water per acre so that thorough spray coverage will be obtained. DO NOT use raindrop nozzles. See the Spray Drift Management section of label for additional information on proper application of Inflame 280 SL.

Aerial Application:

Thorough coverage is necessary for best weed control. For optimal weed control, apply Inflame 280 SL in a minimum of 10 gallons per acre. See the Spray Drift Management section of label for additional information on proper application of Inflame 280 SL.

MIXING INSTRUCTIONS

Tank Mix Instructions:

Inflame 280 SL may be applied in tank mix combinations with labeled rates of other products provided these other products are labeled for the timing and method of application for the crop to be treated. Use the tank mix partner in accordance with label limitations and restrictions. Do not exceed label dosage rates.

Inflame 280 SL may not be mixed with any product containing a label prohibition against such mixing. Refer to the specific crop section for rates and other restrictions. It is the pesticide user's responsibility to ensure that all products are registered for the intended use. Read and follow the applicable restrictions and limitations and directions for use on all product labels involved in tank mixing. Users must follow the most restrictive directions for use and precautionary statements of each product in the tank mixture.

Inflame 280 SL must be applied with properly calibrated and clean equipment. Inflame 280 SL is formulated to mix readily in water. Prior to adding Inflame 280 SL to the spray tank, ensure that the spray tank is thoroughly clean, particularly if a herbicide with the potential to injure crops was previously used.

Refer to product label for complete application and mixing instructions.
