

INSECTICIDE

TALAK™ 7.9% F

QUICK INSECT KNOCKDOWN FOR LAWN CARE PROFESSIONALS

Talak™ 7.9% F provides lasting protection from damaging insects found in landscapes, ornamentals, commercial and residential turf, recreational areas and more. Talak 7.9% F, a 3rd generation pyrethroid, has broad spectrum control. It targets over 75 pests including termites, fire ants, fleas, and ticks. This product uses the active ingredient bifenthrin to give pest control professionals the support they need in their battle against insect damage. After application, there are no unsightly residues or concerns for phytotoxicity. This long-lasting formula is water-based and doesn't contain odors or any plant-damaging solvents. If you need to keep your turf strong, healthy, and pest free turn to Talak 7.9% F.

KEY BENEFITS

- All-weather formula is designed to protect yield for longer
- Flexible application; can be applied by air or ground
- Works through absorption and ingestion for quick insect knockdown

KEY USES

- Commercial and Residential Turf
- Landscapes
- Landscape Ornamentals
- Recreation Areas

Refer to label for specific use restrictions.

Relevant. Simple. Reliable.

APPLICATION INFORMATION

Talak 7.9% F formulation mixes readily with water and other aqueous carriers. Talak 7.9% F may be tank-mixed with adjuvants, and with other pesticides, including insect growth regulators. When tank mixing Talak 7.9% F with other pesticides, observe all precautions and limitations on each separate product label. The physical compatibility of Talak 7.9% F may vary with different sources of pesticide products, and local cultural practices. Any tank mixture which has not been previously tested should be prepared on a small scale (pint or quart jar), using the proper proportions of pesticides and water to ensure the physical compatibility of the mixture.

RESISTANCE

Some insects are known to develop resistance to products used repeatedly for control. Because the development of resistance cannot be predicted, the use of this product should conform to resistance management strategies established for the use area. Consult your local or state pest management authorities for details. If resistance to this product develops in your area, this product, or other products with a similar mode of action, may not provide adequate control. If poor performance cannot be attributed to improper application or extreme weather conditions, a resistant strain of insect may be present. If you experience difficulty with control and suspect that resistance is a reasonable cause, immediately consult your local company representative or pest management advisor for the best alternative method of control for your area.

Refer to product label for complete application and mixing instructions.

KEY INSECTS

Annual bluegrass weevil
Ants
Aphid
Armyworm
Bagworm
Billbug
Black turfgrass ataenius adult
Black vine weevil
Broad mite
Brown soft scale
Budworm
California red scale
Centipedes
Chinch bug
Citrus thrips
Crane fly
Crickets
Cutworm
Diaprepes root weevil
Earwig
Elm leaf beetle
Flea beetle
Fleas
Fungus gnat
Grasshopper
Gypsy moth caterpillar
Imported fire ants
Japanese beetle
Japanese beetle adult
Lace bug
Leaf-feeding caterpillars
Leafhopper
Leafminer
Mealybug
Millipedes
Mite
Mole crickets
Oriental beetle
Pecan leaf scorch mite
Pine needle scale crawler
Plant bug
Root weevil
San jose scale crawler
Sod webworm
Sowbug
Spider mite
Spiders
Stink bug
Tent caterpillar
Thrips
Tip moth
Twig borer
Weevil
White grub
Whitefly
