

RELENTLESS LEAFMINER CONTROL

When leafminers attack your vegetable crops, use Trignata™ WSP to fight back. As an insect growth regulator, Trignata WSP works by affecting the natural growth mechanisms of insects, stunting growth before the population can spread. Trignata WSP quickly penetrates leaves and becomes rainfast after absorption. It specifically controls leafminers and the Colorado potato beetle, and can be used in bulb vegetables, cabbage, cucurbits, peppers, tomatoes, and many other crops.

KEY BENEFITS

- Moves through plant tissue to quickly form a barrier against pests
- Tough on leafminers, gentle on beneficial insects
- Can be tank-mixed with other fungicides and insecticides

RESISTANCE MANAGEMENT

Trignata WSP Insecticide is a Group 17 Insecticide (contains the active ingredient cyromazine). Because of the inherent risk of resistance development to any product, it is strongly advised that Trignata WSP Insecticide be used in a sound resistance management program. Treatment may not be effective against labeled pests if Trignata WSP Insecticide tolerant strains develop.

MIXING AND APPLICATION INSTRUCTIONS

1. Thoroughly clean spray equipment before using this product.
2. Prepare no more spray mixture than is needed for the immediate operation.
3. Agitate spray mixture thoroughly before and during application. Good bypass agitation is sufficient to keep Trignata WSP Insecticide thoroughly mixed.
4. Flush spray tank thoroughly with water daily after use
5. Dispose of pesticide rinsate by application to an already treated area.

Trignata WSP Insecticide alone:

1. Add 2/3 of the required amount of water to the spray or mixing tank.
2. With the agitator running, drop the required number of unopened soluble packets of Trignata WSP Insecticide into the tank. (One 2.66 oz. water-soluble packet of Trignata WSP Insecticide will treat one acre).
3. Continue agitation while adding the remainder of the water.

Do not let spray mixture stand overnight in the spray tank. Rinse spray tank at the end of the day. To avoid spray drift, do not apply under windy conditions. Avoid spray overlap, because crop injury may result.
