

Contains bispyribac-sodium, the active ingredient used in Tradewind®.

## HERBICIDE

# RECKLESS AGAINST AQUATIC WEEDS, GENTLE ON DESIRABLES

Airstream™ is a selective herbicide that treats floating, emergent, and submersed weeds such as hydrilla, watermilfoil, duckweed, and pondweed, while remaining safe on desirable plants, including spatterdock, maidencane, and cattails. Airstream is approved for lakes, ponds, non-irrigation canals, and other water bodies with minimal water outflow to combat persistent weeds year after year.

An ALS inhibitor, Airstream contains the active ingredient bispyribac-sodium which inhibits plant growth. Airstream provides long-lasting residual activity and is a highly effective resistance management tool. You'll notice gradual control often within two weeks, with peak hydrilla control in two to four months. For best results, apply in the spring when plants are actively growing. Utilize this selective chemistry to maintain clear, beautiful waters for all to enjoy with Airstream.

### KEY BENEFITS

- Smaller package size compared to Tradewind®
- 2 oz treats one surface acre
- Controls both floating and submersed weeds
- Selective activity to protect desirable aquatic plants
- Excellent resistance management partner
- High solubility in water

### KEY USES

- Bayous
- Drainage ditches
- Lakes
- Marshes
- Non-irrigation canals
- Ponds
- Reservoirs

Refer to label for specific use restrictions.

### PRODUCT NOTES

**EPA REGISTRATION NUMBER**  
91234-140

**ACTIVE INGREDIENT**  
Bispyribac-sodium 80%

**FORMULATION**  
Soluble Powder

**HRAC NUMBER**  
2

**SIGNAL WORD**  
Caution

**PACKAGE SIZE**  
5 x 4 x 2 wt oz

**RESTRICTED USE**  
No

## CONTROL OF FLOATING AND EMERGED WEEDS USING SURFACE APPLICATION

Apply Airstream as a broadcast spray at 1 to 2 oz of formulated product per acre. Use higher rate for more mature, denser weed growth. Apply in a minimum of 30 gallons of water per acre to ensure adequate coverage.

### RESTRICTIONS

- Do not apply more than 2 oz of Airstream per acre/application.
- Allow 30 days between applications.
- Do not apply more than 8 oz of Airstream per acre per year.
- Do not exceed 4 applications per year.

When applying to densely packed actively growing surface weeds, ensure adequate coverage. A second application may be required for complete control under these conditions.

Airstream may be tank-mixed with 2,4-D, diquat or other registered foliar applied aquatic herbicides for enhanced control of floating and emergent weeds.

## CONTROL OF SUBMERSED WEEDS USING SUBSURFACE APPLICATION

Apply Airstream at a rate that will produce an initial concentration of 20 to 45 ppb in the water column of the treatment zone. Use the higher concentrations when weed biomass is heavy, when weeds are more mature and topped out, and/or when treating less susceptible plants. Use Table 3 in the product label to determine amount of Airstream needed to achieve desired concentration at different water depths. For optimal control, repeat applications to maintain desired water column concentrations of Airstream for 60 to 90 days after initial application, or until target weeds are controlled.

### RESTRICTIONS

- Must use product application rate listed in Table 3 in the product label.
- Do not exceed four applications per year.
- Retreatment interval: minimum 14 days.
- For an 8 foot deep lake, do not exceed 4.8 lb of Airstream per acre per year.
- For an 8 foot deep lake, Do not apply more than 1.2 lb of Airstream per acre per application.

Multiple applications (up to four per year) of Airstream at lower rates may be needed in water bodies where there is a requirement for selective weed control, or the need to control weed species with a longer exposure time requirement.

For subsurface applications, do not allow the water concentration to exceed 45 ppb of Airstream in the treatment zone for any application (either initial or when retreating to maintain the effective water concentration).

Use Enzyme-Linked Immunosorbent Assay analysis or other analytical methods to help determine if and when it is necessary to make sequential applications of Airstream.

*Refer to product label for complete application and mixing instructions.*

Corporation, seller of Tradewind®. Tradewind® is a registered trademark of Valent U.S.A. Corporation. Airstream™ is a trademark of Atticus, LLC.

## KEY WEEDS

### Floating and Emergent Weeds:

Alligatorweed  
Duckweed  
Mosquito fern  
Parrotfeather  
Water fern  
Water hyacinth  
Water pennywort  
Watermeal  
Water lettuce

### Submersed Weeds:

Bacopa  
Cabomba, fanwort  
Egeria, Brazilian elodea  
Hydrilla  
Pondweed, sago  
Water primrose  
Watermilfoil, Eurasian

*(Refer to product label for complete list)*
