

Contains Bifenthrin, the active ingredient used in Bifenture® 10DF.

INSECTICIDE

ULTIMATE DEFENSE AGAINST MITES AND INSECTS

Batallion™ 10 WSP protects many crops from harmful insects like aphids, armyworms, codling moths, navel orangeworms, peach twig borers and many others. This product comes in convenient water-soluble packaging, so measuring and mixing is fast and easy.

Batallion 10 WSP is a second generation pyrethroid with exceptional residual control and the ability to fend off some of the most damaging insects in a broad range of valuable crops including almonds, pistachios, citrus, caneberries, grapes and both brassica and leafy vegetables. The active ingredient bifenthrin protects these crops and many more with fast knockdown, giving your crops the opportunity to thrive.

KEY BENEFITS

- Exceptional residual control
- Water soluble packaging makes measuring and mixing easy
- Works through absorption and ingestion for quick insect knockdown

KEY USES

| ▪ Almonds | ▪ Cucurbits |
| ▪ Bushberries | ▪ Grapes |
| ▪ Caneberries | ▪ Peanuts |
| ▪ Citrus | ▪ Pistachios |

PRODUCT NOTES

EPA REGISTRATION NUMBER
91234-117

ACTIVE INGREDIENT
Bifenthrin 10%

FORMULATION
Wettable Powder

IRAC NUMBER
3A

SIGNAL WORD
Caution

PACKAGE SIZE
4 x 5 x 0.5 lb

RESTRICTED USE
Yes

Refer to label for specific use restrictions.

Relevant. Simple. Reliable.

APPLICATION INFORMATION

The product in this outer package is a wettable powder formulation of the insecticide bifenthrin packaged in a translucent water-soluble bag. Do not allow the inner bag to become wet before adding it to the spray or nurse tank. Do not handle the inner bag with wet hands or wet gloves. Avoid rough handling which may cause breakage. Do not store at temperatures below 32°F (0°C). Allow to warm above 50°F (10°C) before use. Cooler water temperatures increase the time needed for the inner bag to dissolve completely.

RESISTANCE

Some insects are known to develop resistance to products used repeatedly for control. Because the development of resistance cannot be predicted, the use of this product should conform to resistance management strategies established for the use area. Consult your local or state agricultural authorities or universities for details. If resistance to this product develops in your area, this product, or other products with a similar mode of action, may not provide adequate control. If poor performance cannot be attributed to improper application or extreme weather conditions, a resistant strain of insect pest may be present. If you experience difficulty with control and resistance is a reasonable cause, immediately consult your local company representative or agricultural advisor for the best alternative method of control for your area.

KEY INSECTS

Ants
Aphids
Armyworm
Artichoke Plume Moth
Asian Cockroach
Beet Armyworm
Broad Mite
Brown Leaf Notcher
Brown Marmorated Stink Bug
Cabbage Looper
Cabbageworm
Carmine Spider Mite
Cloverworm
Codling Moth
Colorado Potato Beetle
Corn Earworm
Cotton Aphid
Cribrate Weevil
Cutworm
Fire Ants
Fruitworm
Fuller Rose Beetle
Grape Berry Moth
Grasshopper
Ground Beetle
Grubs
Heliothis
Hornworm
Hunting Billbug
Imported Cabbageworm
Japanese Beetle
Leafroller
Looper
Maggots
Meadow Spittlebug
Melonworm
Pea Weevil
Spanworm
Spider Mite
Spittlebug
Spotted Alfalfa Aphid
Spotted Wing Drosophila
Squash Bug
Squash Vine Borer
Stink Bug
Thrips
Twospotted Spider Mite
Velvetbean Caterpillar
Vinegar Fly
Western Grape Leafhopper
Whitefly
Wireworm
