PACKAGE SIZE

16 x 12 wt oz, 4 x 3 lb

RESTRICTED USE

No

Travella™ 20 SG contains the active ingredient dinotefuran, a highly systemic insecticide that provides control of key ornamental and turfgrass pests. When applied as a drench, Travella 20 SG moves quickly throughout plant tissues, offering protection from root to tip against a broad spectrum of insects, including both Q and B-biotype whiteflies. Due to its rapid movement and long residual in woody plant tissues, Travella 20 SG is an important tool for protection from several invasive insect species.

PRODUCT INFO

- Fast-acting systemic control
- Flexible application methods including foliar, soil drench, and bark sprays
- Broad-spectrum activity against economically important pests
